

About TAL

TAL was established in 1991 as one of the first companies to specialise exclusively in foundation remedial works in Ireland.

With a professional Management team and highly skilled specifically trained work-ing crews, we pride ourselves on attention to detail and we are dedicated to the relentless pursuit of perfection in the workplace. Over the past 20 years we have ensured thousands of satisfied customers.

Our many clients vary from Local Authorities, developers / contractors to homeowners, with much of our work based on refer-als and repeat business from Engineers. The types of contracts we have completed vary significantly from large structural repair projects nationwide to small house extensions.

The name TAL is now synonymous in the field of foundation repair and mini-piling.
